Excel files. It is a very simple, open-source utility that enables you to process an image file and transform it into an Excel spreadsheet, converting each pixel into a cell and making further manipulations much easier. It is a great utility for generating pixel art, but it sports a rudimentary user interface and does not offer any advanced features. Get started in no time at all The program comes in the form of a single executable file, and you don't need to install anything before using it. However, it is worth noting that Microsoft Excel needs to be available on your computer for images to be processed successfully. Working with the utility is very simple. First of all, you need to load a BMP, JPG, GIF or PNG image file, and then select the folder where the generated spreadsheet should be saved. Next, click Start and let the software do its thing. Straightforward pixel art generator You should keep in mind that the operation could take a long time, especially when processing a particularly large image. The Cancel button doesn't seem to work at the moment, but you can always just close the application if the job is taking too long. When everything is done, the pixel art will be exported to an XLSX file in the selected output folder. Each pixel in the original image is shown as one cell in the spreadsheet. Useful but fairly rudimentary utility We did not run into any major issues during our tests, as the program was able to process every image successfully. However, since this is the first working version of the program, encountering one or two bugs shouldn't surprise you. Overall, ExcellArt Application is a useful, inexpensive tool that you can use to convert any image to a Microsoft Excel spreadsheet.
