Versatile chorus/canceller effect The chorus effect is one of the most versatile audio effects that can be created. A chorus effect can be used to add an echo-like effect to a low pitched sound or it can be used to help a higher pitched sound to be heard. Tonal vs. Pitch adjustment When using Chorus Box, you can adjust the pitch of the generated sound by simply manipulating the phase of the chorus audio effect. Gain controls An important feature of Chorus Box is its gain controls which can be used to control the level of the chorus effect. In addition to its basic audio effects, Chorus Box features three extra waveforms which will help you achieve more sophisticated effects. Saw Saw is a classic chorus generator which works by using a certain saw to sound wave function. This method will only work if the generated frequency is in the vicinity of the main frequency. Phase Phase is a linear waveform that will gradually increase the phase of the chorus sound as time passes by. Random Random will generate a noise waveform that will never repeat and will never have a clearly defined pitch. Fixed or Variable? Chorus Box is a fixed frequency plugin. This means that Chorus Box will only generate a certain number of half cycles of the frequency. By changing the frequency you can create a different effect.
